Thank you for selecting Aiphone for your communication needs. Please read this manual carefully before installation, and keep this in a safe place for future reference.

Please note that images and illustrations depicted in this manual may differ from the actual product.
### Precautions for mounting

1. Observe the following restrictions for mounting entrance stations.
   - Do not mount the entrance station so that it faces obliquely upward. The rain water may go inside and it may damage the unit.
   - Do not block the bottom of entrance station by caulking.
2. Do not install the unit in any of the following locations. Fire, electric shock, or unit trouble could result.
   - Places near direct sunlight.
   - Places where moisture and humidity extremes are present, such as bathrooms, cellars, greenhouses, etc.
   - Places where the temperature is quite low, such as inside a refrigerated area or in front of an air conditioner.
   - Places with steam or smoke (near heating or cooking surfaces).
   - Places subject to sulfur, such as hot springs.
   - Places near the shore or exposed to the direct sea breeze.
3. Do not install this unit in any of the following locations where lighting or the ambient environment could impact the display on the video monitor due to the characteristics of the door station's camera.
   - Locations where lighting or the ambient environment could impact the display on the video monitor due to the characteristics of the door station's camera.
   - Locations subject to direct sunlight or strong lighting
4. When using a fluorescent light that shines around the camera in the 50Hz area, the screen colors may variously change as color rolling or flickering. Please block off the light or use the inverter fluorescent lamp.
5. For running cables, separate them for audio/video and door release and keep them more than 10cm (3-15/16") away from each other.
6. When using an existing wiring, depending on the type of wiring, it may not operate the system. Please check and change it in advance.
7. Do not place your ear close to the speaker during use as it could cause hearing damage.

### General Precautions

1. Keep the intercom wires more than 30cm (12") away from AC 100-240V wiring. AC induced noise and malfunction could result.
2. When installing and using the system, please consider the privacy and portrait rights of users and visitors. Aiphone shall not be held responsible for violation or privacy or other statutory rights. (The protection of privacy and statutory rights is the responsibility of the customer.)
3. Install the units, which will not be operated, in an area that will be accessible for future inspections, repairs, and maintenance.
4. Be sure to install an entrance station vertically. If it is installed horizontally, rainwater may get into the unit causing a malfunction.
5. For maintenance or after-sales service, make sure to provide the setting data to the customer.
6. Do not put an obstacle such as a foliage plant where monitoring is done by a human body detection sensor.

### Notices

- Do not install the unit close to an electrical appliance or water heater using a dimmer or inverter, a remote controller of floor heating, etc. Failure to do so may generate a noise causing a malfunction of the unit.
- In areas where broadcasting station antennas are close by, intercom system may be affected by radio frequency interference.
- When warm indoor air flows into the unit, dew condensation may be caused by a temperature difference between indoors and outdoors. It is recommended to cover openings on the unit such as cable incoming holes to avoid condensation.
- Using a mobile phone or professional-use radio equipment such as walkie-talkie close to the system may cause a malfunction.

1 SYSTEM CONFIGURATIONS

1-1 Standard system configuration & capacity

Outline of standard system

* Refer to section 4 "WIRING" for details about wiring and connection.

This system is constructed using 2 wires for audio and 2 wires for video and requires minimal work for installation. A maximum of 6 video trunk lines can be used from the video bus controller and audio signal lines use a distribution point from the bus controller. Audio systems can also be configured.

---

Device | Capacity
---|---
Entrance station | Max. 5 (max. 3 per trunk from the DP) *3 *4
Guard station (GT-MKB-N) | Max. 2
Residential/tenant station | Max. 48 (max. 25 per trunk from the DP) *5
Residential/tenant stations in the same residence/tenant | Max. 4 *6
4-way video junction unit (GT-4Z, see section 1-3) | Max. 6 per residential/tenant trunk
Bus control unit (GT-BC) | 1 required
Video bus control unit (GT-VBC [STD]) | Max. 1
Sub residential/tenant station (GT-2H-L, GT-2H) | Max. 3 (connectable to the residential/tenant station GT-2C-L or GT-2C only)

*3: If GT-DB-V, GT-DB-VN or an external door release button is connected to an entrance station that includes GT-SW, a maximum of 3 entrance stations can be connected to the system.

*4: Up to 3 entrance stations can be connected per audio signal line from the DP. If GT-DB-V or GT-DB-VN is used in an entrance station, the maximum number of entrance stations is 2.

*5: The maximum is 100 stations with GT-1D only.

*6: Up to 4 under the following conditions only:
- GT-1A or GT-1D x Max. 4
- GT-1C7(-L) x 1 + GT-1A or GT-1D x Max. 3
- GT-1M3(-L) x 1 + GT-1A or GT-1D x Max. 3
- GT-1M3(-L) x 2 + GT-1A or GT-1D x Max. 2
- GT-2C(-L) x Max. 4

---

*1: Refer to section 4-3 for details about residential/tenant station configurations.

*2: Make sure that a power supply is shared between GT-BC and GT-VBC.

---

Residence/tenant (for GT-2C-L or GT-2C)

- Video door station: JK-DA, JK-DV, JK-DVF
- Door station or doorbell: GT-D

Residential/tenant station: GT-2C-L, GT-2C

Sub residential/tenant station: GT-2H-L, GT-2H

Power supplies:

- [When sub residential/tenant stations are connected]
  - One power supply can be used to power 2 residences/tenants if sub stations are used.

- [When sub residential/tenant stations are not connected]
  - One power supply can be used to power up to 4 residences/tenants if no sub stations are used.

Residence/tenant (for GT-1C7, GT-1C7-L, GT-1M3, and GT-1M3-L)

- Doorbell: GT-D

Monitor/DVR (third party product)
The GT-VBC can be used as an extension adaptor (2 units per sub trunk line).
To do so, set the setting switch MODE to "EXPAND".
Even if two units are used as extension adaptors (MODE: EXPAND), the wiring distance to the farthest residential/tenant station from the GT-VBC (MODE: STANDARD) or GT-VBX is limited to 300 m (980').
The table below shows the maximum wiring distances between devices.

<table>

### Combination examples

#### Audio only, Direct select type (8 stations)

![Combination example](image9)

- GT-DB(\(\text{-V, -VN}\)) + GT-DBP
- GT-SW + GF-4P
- GF-BP

#### Audio/video, Direct select type (8 stations)

![Combination example](image10)

- GT-VB + GT-VP
- GT-DB(\(\text{-V, -VN}\)) + GT-DBP
- GT-SW + GF-4P

#### Audio only, Name scrolling & 10 key type

![Combination example](image11)

- GT-DB(\(\text{-V, -VN}\)) + GT-DBP
- GT-10K + GF-10KP
- GT-NSB + GT-NSP-L

- GT-DB(\(\text{-V, -VN}\)) + GT-DBP
- GT-10K + GF-10KP
- GT-NSB + GT-NSP-L

#### Audio/video, Name scrolling & 10 key type

![Combination example](image12)

- GT-VB + GT-VP
- GT-DB(\(\text{-V, -VN}\)) + GT-DBP
- GT-10K + GF-10KP
- GT-NSB + GT-NSP-L

- GT-SW + GF-4P
2-2 Entrance station (all-in-one type)

All-in-one entrance station
GT-DMB-LVN
(VIGIK and NFC capable)
* GT-4B back box sold separately.

All-in-one entrance station
GT-DMB-N
(NFC capable)
* GF-3B back box sold separately.

USB cable
A-Micro B type (1 m)

Option connector
(7-pin)

Special screwdriver

Screws

* All the above products except GT-DMB-LVN include the Chinese RoHS paper.

2-3 Bus control unit etc.

Bus control unit
GT-BC

Special screwdriver

• English, French installation manual (this manual)
• English, French quick start guide
• Caution sheet (for user)

Video bus control unit
GT-VBC

4-way video junction unit
GT-4Z

Video 1-zone divider
GT-1Z

Expanded bus control unit
GT-BCXB-N
(NFC capable)

USB cable
A-Micro B type (1 m)

* A mounting bracket "DIN rail" included.

Expanded video bus control unit
GT-VBX

* A mounting bracket "DIN rail" included.

External signaling relay
GT-RY

Wood mounting screws

* All the above products include the Chinese RoHS paper.

Optional handset for GT-2C(-L), GT-2H(-L)  
GT-HSA

* All the above products include the Chinese RoHS paper.
### 2-5 Door station

* For JK-DA, JK-DV and JK-DVF, refer to the instruction manual included with the product for details.

**[For GT-2C-L, GT-2C]**

- Door station GT-D
  - Wood mounting screws
  - Screws
  - *A mounting bracket is attached to the product.

**[For GT-MKB-N]**

- Video door station JO-DV
  - Special screwdriver
  - Transparent nameplate

### 2-6 Guard station

- Guard station GT-MKB-N (NFC capable)
  - *A mounting bracket is attached to the product.
  - Screws
  - Option Connector (12-pin)
  - USB cable A-Micro B type (1 m)
  - Insulating plate
  - Cable tie
  - Desk stand

### 2-7 Lift control adaptor

- Lift control adaptor GTW-LC
  - *A mounting bracket “DIN rail” included.

* All the above products include the Chinese RoHS paper.
3 MOUNTING

3-1 Mounting locations

- For video entrance stations and video door stations, the picture quality of the residential/tenant station monitor is affected by the external light surrounding the built-in camera. Do not install these stations in the types of locations shown below.
  - Locations exposed to direct sunlight
  - Locations under street lights or door lights
  - Other locations exposed to strong light

- Controls are located on the right side of the GT-2C-L/GT-2C, GT-2H-L/GT-2H, GT-1C7-L/GT-1C7 and GT-1M3-L/GT-1M3. Allow open space of 5 cm (2”).
- At least 15 cm (6”) of vertical open space from the center of the mounting bracket is needed for mounting the station.
- Entrance stations (all-in-one type) include a sensor. Do not place objects such as plants or trees in places monitored by the sensor. Also, placing the unit in bright sunlit areas may prevent the sensor from working properly.

GT-2C-L/GT-2C
GT-2H-L/GT-2H
GT-1C7-L/GT-1C7
GT-1M3-L/GT-1M3

* GT-1C7-L/GT-1C7 only

The station’s speaker is on the back. Make sure to leave the specified spaces on all sides to ensure sound clarity.

3-2 Cable

- Use PE (polyethylene)-insulated PVC jacket cable. Parallel or jacketed 2-conductor, mid-capacitance non-shielded cable is recommended.
- Never use individual conductors, twisted pair cable or coaxial cable.

To connect low voltage wires, either crimp them with a crimp sleeve or solder them, and then insulate by covering with insulating tape.

[Crimping with a crimp sleeve]

1. Line up solid and stranded conductors, and crimp them.

   Solid conductor
   Stranded conductor

2. Overlap more than half of the width and twist them at least twice.

   Crimp sleeve
   Insulating tape

[Soldering]

1. Twist the stranded conductor around the solid conductor at least three times.

   Solid conductor
   Stranded conductor

2. Bend the tip and solder it. Make sure no lead wire sticks out.

   Soldering
   Insulating tape

3. Overlap more than half of the width and twist them at least twice.

   Wire

NOTES:

- If the lead wire with a connector is short, extend it using an interconnecting cable.
- Connectors have polarity, so pay attention and connect properly. If connected incorrectly, the device won’t work.
3-3 Mounting positions and image view area

⚠️ When using the camera module, if the rain hood is attached a portion of it will show up in the camera display.

**NOTE:** Follow the applicable laws and regulations for mounting location.

### Wide view

#### Vertical

Mounting position 1500 mm (5')
- Approx. 2100 mm (6' 11'')
- Approx. 1200 mm (3' 11'')
- Approx. 900 mm (3')

Mounting position 1300 mm (4' 3'')
- Approx. 1900 mm (6' 3'')
- Approx. 1200 mm (3' 11'')
- Approx. 700 mm (2' 3'')

### Horizontal

Approx. 170°

An area over a range of approx. 170° in a 500 mm (20'') radius from the camera displays. (The display range is a rough estimation and may change due to the installation environment.)

#### Zoom view

#### Vertical

With mounting position of 1500 mm (5')

- **<Up>**
  - Approx. 2200 mm (7' 2'')
  - Approx. 700 mm (2' 3'')
  - Approx. 1500 mm (5')

- **<Center>**
  - Approx. 1800 mm (5' 10'')
  - Approx. 550 mm (1' 9'')
  - Approx. 1230 mm (4' 1'')

- **<Down>**
  - Approx. 1500 mm (5')
  - Approx. 700 mm (2' 3'')
  - Approx. 800 mm (2' 8'')

#### Horizontal

- **<Left>**
  - Approx. 140° (⁺)
  - Approx. 500 mm (20'')
  - Approx. 900 mm (3')

- **<Center>**
  - Approx. 500 mm (20'')
  - Approx. 83°
  - Approx. 900 mm (3')

- **<Right>**
  - Approx. 140° (⁺)
  - Approx. 500 mm (20'')
  - Approx. 900 mm (3')

(⁺): Zoom view range is approx. 140° at 500mm (20'') distance from the camera.

### Objects appear smaller due to greater distortion in the surrounding sections compared to the central section, but a wider area is displayed.

The display range is a rough estimation and may change due to the installation environment.

The zoom position can be changed.
The default zoom position is center.
1. Make a hole for the cable.
2. Use the joint pipe to assemble the back box.
   - Make sure the back box is mounted level.

**Back box assembly dimensions**

* Do not mount the back box on a surface that is recessed by 15 mm (9/16") or more from the external surface of the wall.

3. Assemble the modules.
   - For the useable modules, see section 2-1.
   - The GT-SW can have up to 6 modules.
   - To connect 7 or more modules or to increase the light intensity, please contact supplier (need other parts).

**NOTE:** Before mounting modules to the front panel, complete wiring and DIP switch settings. (Refer to chapter 4 “Wiring” and chapter 5 “Settings”.)

4. Mount each module panel to the front frame.
   - Mount the panels from behind the front frame.
   - Insert the holders into the slots on both sides.
   - (With the GT-4F, mount the module panels so that they catch on the tabs from top to bottom.)

5. Mount each module, except the GT-AC, to the mounting bracket.
   - Set the modules in the mounting bracket until they click in place.
   - To mount multiple rows of modules, apply the mounting gauge to the mounting bracket.
   - While using the mounting gauge to make adjustments, tighten the screws.
   - (A mounting gauge is included with the GF-2B, GF-3B, and GT-4B built-in back boxes.)

**Options**

- Rain hood GT-203H
- Hooded surface-mount box GT-203HB
- Surface-mount box GF-203BA
6 Slide down and then open the terminal cover, and connect wires to the terminal block. Insert the wire into the direct terminal. Press the tab to easily insert the wire into the terminal, then release.

7 From the audio module to the next module, insert the attached connector into the socket.

8 Attach the connection cables between the modules. Mount modules on the back boxes.

9 Run the connection cable through the joint pipe and connect CN1 of the GT-SW to the next row.

10 For the GT-SW and GT-AD, remove the resident name/address plate or paper by pressing either the left or right end. (Peel off the plastic film.) Use a permanent pen to write the resident name and address on the transparent plate and mount the plate on the module.

11 Close the terminal cover. Mount the front frame and tighten with the special screwdriver (included with GT-BC).
Entrance station (all-in-one type)

GT-DMB-LVN/GT-DMB-N

1. Slide down and then open the cover, and connect wires to the terminal block. Insert the wire into the direct terminal. Press the tab to easily insert the wire into the terminal, then release.

2. Close the cover until it clicks into place.

3. Mount the unit in the flush mount back box.

4. Tighten the locking screws using the special screwdriver.

NOTE (GT-DMB-LVN only): For installing VIGIK or a key cylinder, refer to the instructions included with the product.
3-6 Bus control unit, 4-way video junction unit, lift control adaptor and power supply

DIN rail mounting

⚠️ The maximum cable length between the GT-BCXB-N and GT-VBX is 40 cm. Therefore, mount them side by side.

1 Mount the unit on the DIN rail and then click the unit into place, or mount the unit directly to a wall.
   - GT-BC, GT-VBC, and GT-4Z do not include the DIN rail. Use the W-DIN11 for mounting these units.
   - GT-BCXB-N, GT-VBX, GT-MCX and GTW-LC are mounted to the included DIN rail.

2 When removing the unit, pull the lock release lever down.

**NOTES:**
- Keep wiring away from NFC mark, as it may disturb the audio or video signals.
- Be sure to mount the other devices more than 20 cm (7-7/8") away from NFC mark of GT-BCXB-N.

⚠️ Connector cable length: 40 cm

- Expanded video bus control unit GT-VBX

**Wiring**

Insert the wire into the terminal. Press the tab to easily insert the wire into the terminal, then release.

* The image of the terminals may differ from the actual product.
Surface wiring

* The cable can be routed as surface wiring to the top or bottom of the unit.

Cut a cable inlet on the upper part of the unit to allow passage of the wiring into the unit from above.

If there is a large amount of wiring, strip away the jacket of the cable up to the cable inlet.

Optional handset

* When using a gang box, a 3-gang box is recommended.
Back wiring
Cut a small round hole (ø30mm (1-3/16")) in the wall for routing wires.

GT-1C7-L/GT-1C7

1. Press the release button (to insert or remove the wire).
2. Insert the wire into the terminal.

GT-1M3-L/GT-1M3

1. Press the release button (to insert or remove the wire).
2. Insert the wire into the terminal.

NOTES (GT-1C7-L/GT-1C7 only):

- The station has a speaker on the back. When using a gang box for routing the wires, use a single gang box and attach the mounting bracket to the wall as shown above. If a 2- or 3-gang box is used, audio quality may be altered.
- Depending on the material of the wall, volume and quality of sound coming from the speaker may be altered.

Surface wiring
The wires can be routed to the top or bottom of the station.
Cut the cable inlet to allow passage of the wiring into the station from above.
If there is a large amount of wiring, strip away the jacket of the wire up to the cable inlet.

GT-1C7-L/GT-1C7

Mounting screw × 4 (not included)
Screw shaft: Ø4.1 or less
Slotted head: Ø8.2 or less, 3.0mm or less in height

* To pass the wire through the back of the station, cut out the cable inlet.

GT-1M3-L/GT-1M3

Mounting screw × 2 (not included)
Screw shaft: Ø4.1 or less
Slotted head: Ø8.2 or less, 3.0mm or less in height

* To pass the wire through the back of the station, cut out the cable inlet.
1 Mount the mounting bracket on the wall.
   * When using a gang box, a single gang box is recommended.

2 Connect wires to the terminal block.
   * If it is difficult to insert the wire, insert it while pressing the release button.
   * To remove the terminal block, slide the terminal block and pull it out.
   * Strip away the jacket of the wire and insert all wires into the slots in an orderly fashion. Failure to do so could result in pinching that may damage the wiring.
   * For surface wiring, cut out the cable inlet.

   **NOTE:** Be sure to route the wires inside the cable guides. Otherwise, the wires could be damaged when attaching the station to the mounting bracket.

3 Mount the station to the mounting bracket.

**GT-1A**

1 Mount the mounting bracket on the wall.
   * When using a gang box, a single gang box is recommended.

2 Connect wires to the terminal block.
   * If it is difficult to insert the wire, insert it while pressing the release button.
   * To remove the terminal block, slide the terminal block and pull it out.
   * Strip away the jacket of the wire and insert all wires into the slots in an orderly fashion. Failure to do so could result in pinching that may damage the wiring.
   * For surface wiring, cut out the cable inlet.

   **NOTE:** Be sure to route the wires inside the cable guides. Otherwise, the wires could be damaged when attaching the station to the mounting bracket.

3 Mount the station to the mounting bracket.

**GT-1D**

1 Remove the screw, and then remove the case from the chassis.

2 Route the wires through the wire inlet of the chassis, and then connect the wires.

3 Attach the chassis on the wall.
   * Be careful not to pinch the wires between the chassis and the wall.

4 Attach the case to the chassis and tighten the screw.

5 Plug in the handset to the jack.

   * The image of the terminals may differ from the actual product.
**GT-D**

1. Loosen the screws and remove the mounting frame from the main unit.
2. Mount the mounting frame on the wall.
   * When using a gang box, a single gang box is recommended.
3. After connecting the wiring, mount the main unit to the mounting frame.
   * For surface wiring, insert wiring from the cable inlet (lower part).

**JO-DV (for GT-MKB-N only)**

1. Loosen the special screw with the special screwdriver, and remove the front panel.
2. Insert the transparent nameplate.
   1. Peel off the protective seals on the plate (both sides).
   2. Use a permanent pen to write the resident name on the transparent plate.
      * Be sure to leave 25 mm (1") of white space on the right end to account for insertion.
   3. Insert the filled-in transparent nameplate.
      (indicated with in diagram).
3. Connect wires to the unit.
4. Mount the unit to the mounting surface.
   * Use board anchors or concrete plugs as needed.
5. Replace face plate and tighten special screw with the included special screwdriver.

**JK-DA, JK-DV, JK-DVF (for GT-2C-L, GT-2C only)**

Refer to the installation manual included with the product.
3-9 Guard station

GT-MKB-N

When mounting on a wall

<Back wiring>

1. Mount the mounting bracket to the wall.
   * When using a gang box, a 3-gang box is recommended.
2. Connect the wires to the station.
3. Attach the station to the mounting bracket.

<Surface wiring>

Connect the wires to the station and route them as shown in the figure.

When mounting on the desktop stand

1. Set up the desktop stand.
   * Set up the desktop stand on a level surface so that it is stabilized.
   * Fix the desktop stand in place if needed.
   * The desktop stand can be adjusted to 3 angles.
   * Fit the leg in a groove on the base for the desired angle.
2. Attach the mounting bracket and insulation plate to the desktop stand.
3. Connect the wires to the station.
4. Attach the station to the mounting bracket.

NOTE: Keep wiring away from NFC mark, as it may disturb the audio or video signals.

How to connect and remove wires

1. Press the release button (to insert or remove the wire).
2. Insert the wire into the terminal.
4 WIRING

4-1 Standard system

The following is an example of a basic wiring diagram for the standard system.
* The wiring methods differ depending on the equipment used. Refer to sections 4-2 to 4-4 for the detailed wiring diagrams of entrance stations, guard stations, and residential/tenant stations.

⚠️ Each pair of wires should be in a separately jacketed cable (audio, video, and power wiring).
⚠️ To prevent shorts, unused cables should be insulated.

**NOTES:**
- Do not use the unused terminals and ports for other purposes.
- In order to prevent miswiring, label both ends of each cable with the unit and terminal names to which they are to be connected.
- For connecting other manufacturers’ products, refer to the instruction manuals for those products.

---

**Guard station (max. 2)**

Guard station 1
Guard station 2

* Refer to section 4-2 for detailed connection diagrams.

**Entrance station (max. 5)**

Entrance station 1
Entrance station 2
Entrance station 3
Entrance station 4
Entrance station 5

* Refer to section 4-3 for detailed connection diagrams.

---

**Common area**

Video bus control unit

*1* DP (Distribution Point) wiring example
- When using a distribution terminal block, it is not provided by Aiphone except for Europe and North America.
- After making connections, be sure to check that there are no disconnected or loose parts.
Residential/tenant trunk

Up to two GT-VBC can be used as extension adaptors per trunk line.

*2: To use the GT-VBC as an extension adaptor, set the MODE setting switch to [EXPAND].

*3: The wires must be connected to the IN (1) terminals.

(Please note that images and terminal position in this manual may differ from the actual product.)
4-2 Guard station

NOTES:
- Refer to section 4-7 for option connector details.
- Refer to section 5-1 for the switch settings.

Connect to the bus control units.
Standard system: section 4-1
Expanded system: section 4-5

Guard station 1
GT-MKB-N

Guard station 2
GT-MKB-N

Option button output
Doorbell
Buzzer etc.
Buzzer etc.
Video output contact
Monitor/DVR (third party product)

External signal relay GT-RY
External signal relay GT-RY
External signal relay GT-RY

Termination setting:
For terminating guard station, set SW1 to "A".

Set SW1 to "B".

* Refer to section 4-7 for option connector details.
* Refer to section 5-1 for the switch settings.

(Please note that images and terminal position in this manual may differ from the actual product.)
4-3 Entrance station

Modular type and all-in-one type entrance stations are available. The wiring method differs depending on the type or the combination of modular units, as shown below.

■ Modular type (video and audio)

Modular unit combination example

Entrance station

NOTES:
- Refer to section 4-7 for option connector details.
- Refer to section 5-1 for the switch settings.

(*)1: N/C (Normally Closed) [ELB, ELC]
   N/O (Normally Open) [ELM, ELC]
   Less than AC/DC 24V, 4A (resistive load)

(*)2: GT-DB-V and GT-DB-VN only.

(*)3: Input specifications

<table>

NP: Non-polarized
P: Polarized

(Please note that images and terminal position in this manual may differ from the actual product.)
Residential/tenant trunk

NOTE: This system allows 3 types of connection methods: “Loop wiring method”, “GT-4Z wiring method”, and “GT-1Z wiring method”. Select the method suitable for the application and usage of the system.

Loop wiring method

**GT-2C-L/GT-2C, GT-2H-L/GT-2H**

* Refer to section 4-7 for details about the option connector.

**Termination setting:**
For terminating a residential/tenant station, set SW1 to “A”.

For terminating a sub residential/tenant station, turn 4 on SW2 to ON.

**NOTES:**
- Refer to section 4-7 for details about wiring to the option connector.
- Refer to section 5-2 for the switch settings.

After connecting a residential/tenant station and a door station (or doorbell), power cycle the unit.

- : Audio signal line
- : Video signal line
- : Power supply line

NP: Non-polarized
P: Polarized

(Please note that images and terminal position in this manual may differ from the actual product.)
Loop wiring method

GT-1C7-L/GT-1C7, GT-1M3-L/GT-1M3

⚠ Turn off the GT-BC control unit before connecting wires. Failure to do so could damage the station.

---

Residential/tenant station
GT-1C7-L/GT-1C7

Residential/tenant station
GT-1M3-L/GT-1M3

Termination setting:
For terminating a residential/tenant station, set SW1 to "A".

Set SW1 to "B".

Notes:
- Refer to section 4-7 for details about wiring to the option connector.
- Refer to section 5-2 for the ID switch settings.

* Connect to the bus control units.
Standard system: section 4-1
Expanded system: section 4-5

*1: Doorbell
- N/O contact (non-locked type)
- DC 12 V/0.1 A or higher

*2: Emergency alarm switch
- N/C contact (locked type)
- DC 12 V/0.1 A or higher

*3: Jumper wire between K and KE
Jumper wire must remain in place if not using an emergency alarm switch.

NOTES:
Audio signal line
Video signal line
Power supply line
NP: Non-polarized

(Please note that images and terminal position in this manual may differ from the actual product.)
GT-1Z wiring method (using the video 1-zone divider)

GT-2C-L/GT-2C, GT-1C7-L/GT-1C7, GT-1M3-L/GT-1M3

* The following diagram is a wiring example using the residential/tenant stations GT-1C7-L/GT-1C7 and GT-1M3-L/GT-1M3.

GT-1C7-L/GT-1C7
GT-1M3-L/GT-1M3

SW1

Termination setting:
For terminating a residential/tenant station, set SW1 to "A".

NOTE: Do not connect the GT-1Z to the terminal residential/tenant station.

Residential/tenant station
GT-1C7-L/GT-1C7

Residential/tenant station
GT-1M3-L/GT-1M3

Video 1-zone divider
GT-1Z

NOTE: Refer to pages 34 and 35 for the wiring details of residential/tenant stations.

* Connect to the bus control units.
Standard system: section 4-1
Expanded system: section 4-5

NP: Non-polarized

Audio signal line
Video signal line

(Please note that images and terminal position in this manual may differ from the actual product.)
■ GT-4Z wiring method (using the 4-way video junction unit)

GT-2C-L/GT-2C, GT-1C7-L/GT-1C7, GT-1M3-L/GT-1M3

* The following diagram is a wiring example using the residential/tenant stations GT-1C7-L/GT-1C7 and GT-1M3-L/GT-1M3.

NOTE: Refer to pages 34 and 35 for the wiring details of residential/tenant stations.

Residential/tenant station

Termination setting:
For terminating the 4-way video junction unit, set SW1 to "A".
1 residential/tenant station can be connected to [LINE OUT]. In this case, set SW1 to "B".

Set SW1 to "B".

(Please note that images and terminal position in this manual may differ from the actual product.)
**NOTE:** Refer to section 4-7 for details about wiring to the option connector.

Residential/tenant station (audio only)

**GT-1A**

* Connect to the audio bus control unit.
  - **Standard system:** section 4-1
  - **Expanded system:** section 4-5

(No connection is needed to the video bus control unit GT-VBC.)

**GT-1A**

- **R1**
- **R2**
- **C**
- **CE**
- **K**
- **KE**

**Doorbell (**1**)

(third party product)

**Emergency alarm switch (**2**)

(GFK-PS available in North America only.)

**NP:** Non-polarized

(**1**): Doorbell
- N/O contact (non-locked type)
- DC 12 V/0.1 A or higher

(**2**): Emergency alarm switch
- N/C contact (locked type)
- DC 12 V/0.1 A or higher

(**3**): Jumper wiring between **K** and **KE**.
Jumper wire must remain in place if not using an emergency alarm switch.
Residential/tenant station (audio only)  

**GT-1D**

NOTES:
- Refer to section 4-7 for details about wiring to the option connector.
- To connect wires, the case must be removed from the chassis. Refer to section 3-7 for how to remove the case.

⚠️ Turn off the GT-BC control unit before connecting wires. Failure to do so could damage the station.
⚠️ Be careful not to damage the circuit board when connecting wires and mounting the station. Failure to do so could damage the station.

* Connect to the audio bus control unit.

**Standard system**: section 4-1
**Expanded system**: section 4-5

(No connection is needed to the video bus control unit GT-VBC.)

---

(*1): Doorbell  
- N/O contact (non-locked type)  
- DC 12 V/0.1 A or higher

(*2): Emergency alarm switch  
- N/C contact (locked type)  
- DC 12 V/0.1 A or higher

(*3): When using an emergency alarm switch, remove the jumper wire from the JP1 connectors. Otherwise, leave the jumper wire connected.
When using Doctor call, remove the jumper wire from the JP4 connectors. Otherwise, leave the jumper wire connected.

(*4): Only one emergency alarm switch and one doorbell can be connected to the same station. Each station uses its own option connector for external devices used for that tenant.

(*5): When making a connection to the CN4 connector, remove the protective cap.
Use two separately jacketed 2 conductor cables for the audio and video connections.
To prevent shorts, unused cables should be insulated.
Do not connect 2 or more GT-BC units on the same trunk line.

Guard station
* Refer to section 4-2 for detailed connection diagrams.

Entrance station
* Refer to section 4-3 for detailed connection diagrams.

Common trunk line 1

Common trunk line 2
* Use the same method for connecting each common trunk line.

Sub trunk line 1-A
* Make connections in the same method with the sub trunk line 2-B.
The following is an example of basic wiring diagram for the expanded system.

* The wiring methods differ depending on the equipment used. Refer to section 4-2 to 4-4 for detailed wiring diagrams of entrance stations, guard stations and residential/tenant trunks.
Max. 16 adaptors (GTW-LC) can be connected to a system.

* Max. 8 adaptors (GTW-LC) per trunk.

NOTE: Refer to section 5-1 for the ID switch settings.

---

### Lift control trunk 1

Connect to the expanded bus control unit, GT-BCXB-N. Refer to section 4-5 for detailed connection diagram.

### Lift control trunk 2

Same as lift control trunk 1.

* Connect to the expanded bus control unit.
* Max. 8 GTW-LC can be connected per trunk.
4-7 Option connector

⚠️ To prevent shorts, be sure to cut unused lead wires and insulate the ends.
⚠️ Installation setting is necessary for the GT-2C-L/GT-2C. Refer to the GT SYSTEM Setting manual to perform the settings.

---

12-pin option connector

- K (Brown) - Emergency alarm
- KE (Red) - Call notification
- RY (Blue) - Option contact output
- RY (White) - Security/Utility input 1

---

5 **Video out**
Video can be output to DVR’s, etc.
NTSC, 1 Vp-p/75 Ω
Wiring distance: 3 m
NOTE: The screen playing recorded pictures is not output.

---

6 **Video out notification**
External monitors can be activated via the external signaling relay GT-RY.
GT-RY contact spec.: AC/DC 24 V, 0.5 A

---

7 **Doctor call (automatic entry)**
This makes it possible to use the doctor call (automatic entry) function at residential/tenant stations.
To enable the doctor call:
- GT-1C7-L/GT-1C7, GT-1M3-L/GT-1M3, GT-1A
  Short the DC terminal.
- GT-1D
  Cut (open) the jumper JP4.

---

8 **Doorbell**
A doorbell can be connected to a residential/tenant station.
N/O contact (non-locked type)
DC 12 V/0.1 A or higher
NOTE: One doorbell per residential/tenant station. Do not connect two or more doorbells to a residential/tenant station.

---

**External signaling relay connection example**

- GT-RY contact spec.: AC/DC 24 V, 0.5 A
- (+): Third party product
The settings of each unit can be configured manually by setting the switches, as described below.

* It is recommended to discuss the installation and setting method with the person responsible for installation in advance.

### 5-1 Switch settings

</tr>
</tbody>
</table>

■ Lift control adaptor

GTW-LC

ID switch

Set the lift control ID number of this unit by the combination of the switch 1 to 4 settings as shown below.
### Switch settings (for residential/tenant stations only)

#### 2 SW2

Residential/tenant stations must be linked to entrance/guard stations for enabling calling and communication. All video residential/tenant stations can have “UNIT Link-ID” set by using SW2.

<table>
<thead>
<tr>
<th>Function</th>
<th>Default</th>
</tr>
</thead>
<tbody>
<tr>
<td>The DIP switches of SW2 must be used when setting UNIT Link-IDs by using the “Manual Setting” method.</td>
<td>1: OFF 2: OFF 3: OFF 4: OFF 5: OFF 6: OFF 7: OFF 8: OFF (0000 0000)</td>
</tr>
</tbody>
</table>

- **Automatic setting:**
  - Set the DIP switches to “0000 0000”.
  - The UNIT Link-ID is set automatically.
  - For GT-1D and GT-1A, UNIT Link-ID is always set automatically.

- **Manual setting:**
  - Set the UNIT Link-ID by using the DIP switches.
  - Decide the UNIT Link-IDs in advance, and coordinate with the system installer for SW2 DIP switch settings.

**NOTE:**
If there is mixture of video and audio residential/tenant stations in the site, only Automatic setting should be used.

#### Setting method

1. Change the decimal notation ID to binary to set the residence ID.
   - 1 indicates (ON) and 0 indicates (OFF).
   - For binary notation, refer to the DIP switch & ID list for residential/tenant stations (*1) in the setup tool and perform settings as shown below.

<table>
<thead>
<tr>
<th>Decimal notation</th>
<th>Binary notation</th>
<th>DIP switches</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>0000 0001</td>
<td></td>
</tr>
<tr>
<td>2</td>
<td>0000 0010</td>
<td></td>
</tr>
<tr>
<td>3</td>
<td>0000 0011</td>
<td></td>
</tr>
<tr>
<td>4</td>
<td>0000 0100</td>
<td></td>
</tr>
<tr>
<td>48</td>
<td>0011 0000</td>
<td></td>
</tr>
<tr>
<td>250</td>
<td>1111 1010</td>
<td></td>
</tr>
</tbody>
</table>

2. Create a correlation table with the setup tool between the ID set for residences/tenants and the residential/tenant station names and upload this to the entrance station or guard station.

   - For information on how to use the setup tool, see the GT SYSTEM Setting Manual and Aiphone GT Setup Tool for Windows on the Aiphone website.

   - Saving programmed data and resident information data to your PC is recommended.

   - In addition, set up the system for the entrance station(s), guard station(s), and residential/tenant stations. (Refer to the GT SYSTEM Setting Manual.)

(*1): The DIP switch & ID list for residential/tenant station is available from the Aiphone website.

Aiphone website: http://www.aiphone.net/

**NOTE:** Refer to the GT SYSTEM Setting Manual for configuring the system setup.
6  CHECK FOR INSTALLATION

When checking operation after system installation shows a malfunction in spite of no error in equipment terminal connections, check for the following "grounding point" and "ground fault" in wiring.

Tools required: Analog tester

NOTES:
- A digital tester cannot make a precise reading.
- A megohmmeter cannot be used.

### 6-1 Finding a proper "grounding point" for power supply

1. Set the tester for 250V AC or more.

2. Find the "hot" side of the AC outlet to be connected with a power plug.
   2-1. Put one tester rod to the point that seems to be a grounding point.
   2-2. Touch the other tester rod contact to one of the AC outlet slots to find the side where the tester needle swings.

   The side where the tester needle swings is the "hot" side.

3. Find the proper grounding point.
   3-1. With one tester rod put on the “hot” side, put the other to the point that seems to be a grounding point.

       * If the needle swings to the power supply value for your country, it will be considered a proper grounding point.
       * If the needle does not reach the power supply value, it will not be considered a proper point.
   3-2. Find the grounding point by repeating this step until the needle points to the proper value.

4. Connect the power supply ground terminal [G] with the grounding point found in step 3.
6-2 Checking "ground fault" with tester

What is "ground fault"?
"Ground fault" means the state where internal copper wire is touching a metal part (ground) in the building because the coating on the wiring of the intercom system is peeled off. This may cause the equipment to malfunction. Being in the ground fault state, the whole system will be damaged seriously by a "power surge."

Inspection conditions:

Important
• Check that the power supply is grounded properly as described in 6-1.
• Before starting inspection, make sure all control units (GT-BC, GT-VBC, GT-BCXB, GT-VBX), entrance station, and guard station are turned on. (Only when the equipment is installed)

Inspection procedure:

1 Set the tester for around 50V DC.

2 Put one tester rod to the power supply ground terminal [ ]. If the power supply is not nearby, find a grounding point referring to 6-1.

3 With one tester rod put on the power supply ground terminal, put the other to the following terminals to be inspected.

4 If the tester needle does not swing in step 3, it will be judged "no ground fault."
   * If the tester needle swings, there is a ground fault in wiring between the power supply and the inspected point. (The same is true in the case where the needle swings reversely.)

Solution:
Divide the wiring into sections or trunk lines, identify the ground fault point, and remove the cause.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
